

CryptoQuestion
Your cryptocurrency companion

'If you teach a man to fish, he will be richer forever'

Cryptocurrency is hot! However, if you mention cryptocurrency to the average person in the street his or her first reaction is, 'It's a bubble,' followed by some talk about how they don't understand how bitcoin works and that you can't buy the shopping with it. 'Invest in it? I wouldn't even know where to start,' they would conclude. And that is all understandable. We were all there once.

The average person has never heard of Ethereum. Mention smart contracts and lending protocols and your audience would be gazing around looking for the nearest distraction. With all that said we at CryptoQuestion are launching the Cryptocurrency Bootcamp. Our objective is to educate the average person in all things cryptocurrency. It isn't a course in coding mind you. Our aim is to teach people all about the main elements of cryptocurrency from the basics to the more advanced concepts. If you are tempted to invest in bitcoin, for who isn't right now? Or you want to explore the cryptocurrency world outside of bitcoin, then it is always advisable to know what you are investing in. As Warren Buffett the uber successful investor always says, 'Never invest in something you cannot understand.'

Free with No Gimmicks

The Cryptocurrency Bootcamp is absolutely **free**. No strings attached, no gimmicks. Our only objective is to educate people in the world of cryptocurrency by providing a range of free resources. This is one such resource.

With PayPal entering the market and making mass adoption of bitcoin a reality. With the fast expansion of other areas of the cryptocurrency world such as DeFi (Decentralized Finance) where you can earn interest by lending your cryptocurrency or make predictions on certain events and receive a guaranteed payout if you are correct. It is sensible to understand how this all works, what are the opportunities and crucially where are the risks. The crypto world isn't all gravy and roses. There are risks and as a potential participant in the crypto market you should know what kind of animal you are dealing with.

The Curriculum

They say a little knowledge is a dangerous thing. The Cryptocurrency Bootcamp aims to provide you with online education covering seven modules over seven weeks. It isn't a full time course by any means. We all have better things to do than learn about esoteric concepts like blockchain. We estimate that you will spend no more than 30 minutes a week listening to a combination of lectures, reading our accompanying notes to the course and completing a few simple exercises to test your knowledge.

The seven modules include:

- Module 1: Understanding Bitcoin**
- Module 2: Understanding Altcoins**
- Module 3: Ethereum Deep Dive**
- Module 4: ERC20 Tokens Explained**
- Module 5: Initial Coin Offerings**
- Module 6: Trading Crypto**
- Module 7: Decentralized Finance**

We try to keep things as simple as possible, we will avoid overloading you with information and keep our narrative as non technical as possible.

An Interactive Course

The best part about the Cryptocurrency Bootcamp is that it is interactive. That means that we don't just send you a bunch of videos and let you get on with it. We will devote each week to one module. You will also be able to ask us questions about anything you don't understand or areas where you want more information.

That is why we are limiting our first bootcamp to only 100 people.

Work at your own Pace

We would love to see you on our first bootcamp. But don't worry this isn't a rigid bootcamp military styles. You can work at your own pace. You decide if you want to skip a module or take 10 weeks or 2 weeks to complete it. You also decide how much interaction you have with the tutor. Maybe a particular module bores you to death or you don't think you have much use for it. Skip it. Focus on what you want to learn. Then once you have digested all the information feel free to ask us anything from how blockchain works to which cryptocurrencies we believe are worth a closer look. Whatever the question we will have an answer for you.
